

Approved Use

EVENITY® is a prescription medicine used to treat osteoporosis in women after menopause who are at high risk of fracture, or cannot use another osteoporosis medicine or other osteoporosis medicines did not work well.

Important Safety Information

What is the most important information I should know about EVENITY®?

EVENITY® can cause serious side effects, including increased risk of having a heart attack, stroke, or death from a cardiovascular (heart or blood vessel) problem. Call your healthcare provider or get emergency help right away if you have any of these symptoms: symptoms of **heart attack,** which may include: chest pain or pressure**;** shortness of breath**;** feeling light-headed or dizzy; or symptoms of **stroke,** which may include: headache**;** numbness or weakness in face, arm, or legs; difficulty talking**;** changes in vision or loss of balance.

Please see additional Important Safety Information on following pages.

Building bone

REDUCES FRACTURE RISK FURTHER

than slowing bone loss alone

If you're at very high risk for fracture, **starting with a bone-building treatment is recommended** to rapidly increase bone mineral density and reduce fracture risk.*

EVENITY is the

FIRST & ONLY

FDA-approved bone builder that also helps slow bone loss

So you can be sure you're doing enough to strengthen your bones.

Important Safety Information (continued)

Before you receive EVENITY®, tell your healthcare provider if you have had a heart attack or stroke, especially if it has happened in the past year.

Do not receive EVENITY® if you: have low blood calcium; or are allergic to romosozumab or any of the ingredients in EVENITY®.

EVENITY® (romosozumab-aqqg) injection 105 mg/1.17 mL

Please see Important Safety Information continued on the following pages.

*Based on the 2024 American Society for Bone and Mineral Research/Bone Health and Osteoporosis Foundation (ASBMR/BHOF) position statement on osteoporosis treatment.

KNOW YOUR RISK—AND LOWER IT

The first step in lowering your fracture risk is understanding it.

YOUR FRACTURE RISK CAN KEEP RISING

Postmenopausal osteoporosis can continue to weaken your bones over time—increasing your risk of breaking a bone. Starting treatment may help reduce your risk.

3 OUT OF 4 WOMEN

WITH POSTMENOPAUSAL OSTEOPOROSIS
age 55+ at high risk for fracture
will break a bone in their lifetime

Do you know what your T-score means?

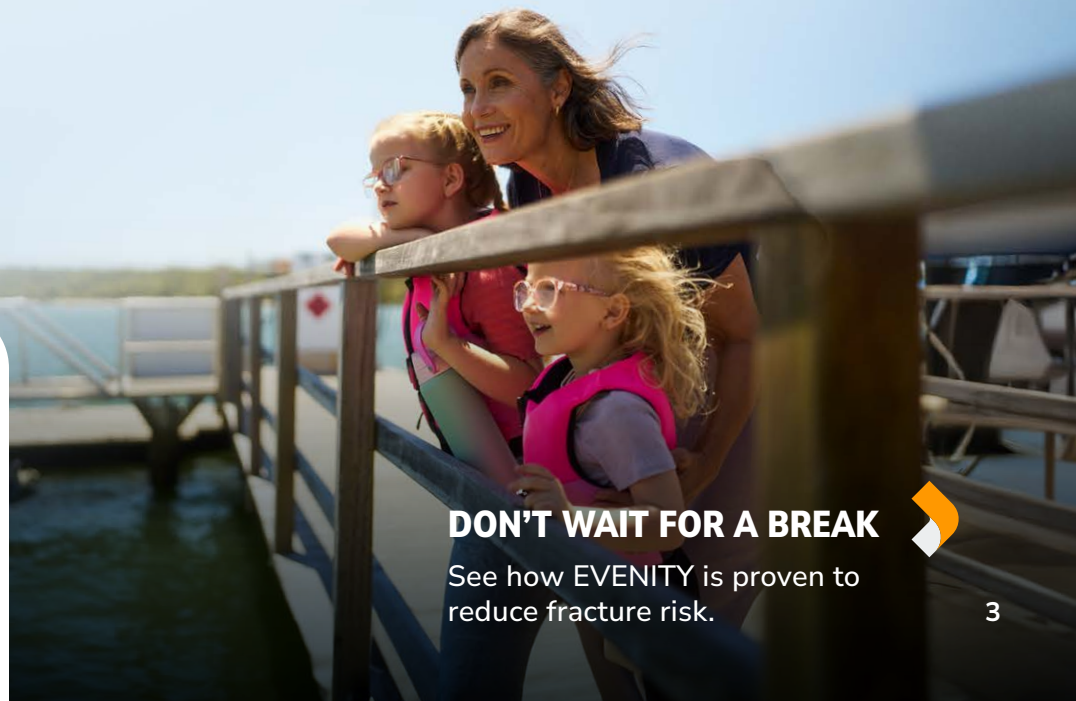

Your T-score is a measurement of your bone density that helps your doctor determine your fracture risk. A declining T-score is a serious warning that your fracture risk is climbing.

The more of these risk factors you have, the higher your risk of breaking a bone:

- T-score less than or equal to -2.5
- Age 65 or older
- Low body weight
- Previous broken bone
- History of falling
- Excessive alcohol use (≥3 drinks/day)
- Parent suffered a hip fracture
- Cigarette smoking
- Rheumatoid arthritis
- Diabetes
- Long-term steroid use such as prednisone

Talk to your doctor about your fracture risk and whether it's time to lower it with EVENITY®.

Important Safety Information (continued)

Before receiving EVENITY®, tell your healthcare provider about all your medical conditions, including if you:

- have a history of other heart or blood vessel problems
- have low blood calcium

EVENITY® (romosozumab-aqqg)
injection 105 mg/1.17 mL

Please see Important Safety Information continued on the following pages.

DON'T WAIT FOR A BREAK

See how EVENITY is proven to reduce fracture risk.

EVENITY® is proven to

REDUCE FRACTURE RISK & INCREASE BONE MINERAL DENSITY

In a clinical study that followed over 7,000 women with postmenopausal osteoporosis receiving EVENITY or placebo (a treatment without medicine) for 12 months, women receiving EVENITY had fewer new spine fractures than women receiving placebo at 12 months.

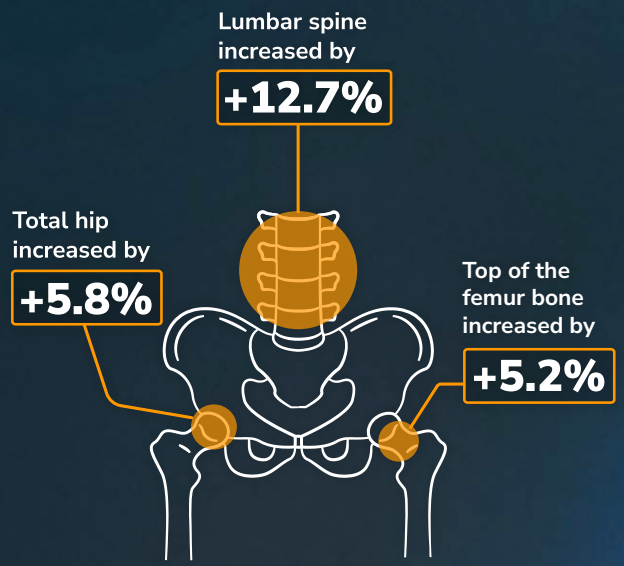

REDUCE SPINE FRACTURE RISK

73%

Women receiving EVENITY had fewer new spine fractures (0.5%) than women receiving placebo (1.8%) at 12 months.

INCREASED BONE MINERAL DENSITY

IN JUST 12 MONTHS

Individual results may vary.

Important Safety Information (continued)

- cannot take daily calcium and vitamin D
- have kidney problems or are on kidney dialysis
- plan to have dental surgery or teeth removed

What are the possible side effects of EVENITY®?

EVENITY® may cause serious side effects, including:

EVENITY® (romosozumab-aqqg) injection 105 mg/1.17 mL

Please see Important Safety Information continued on the following pages.

SEE THE RESULTS IN ACTION

Discover the real impact of building new bone with EVENITY.

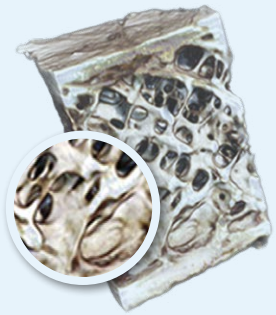

RAPIDLY BUILD NEW BONE

in just 12 months

UNTREATED
bones with osteoporosis

HOW EVENITY IS TAKEN

Know what to expect during 12 months of EVENITY.

What to expect during

A YEAR OF BUILDING BONE

1 = 2
DOSE SHOTS
Each EVENITY dose consists of 2 shots

1x
MONTHLY
EVENITY is given monthly during your office visit

12
MONTHS
EVENITY is taken for just 12 months

Each EVENITY dose consists of 2 shots given under your skin every month by your doctor or healthcare provider. You should take calcium and vitamin D as your doctor tells you to while you receive EVENITY. If you miss an appointment, contact your doctor as soon as possible to reschedule.

After 12 months of EVENITY

Ask your doctor to schedule a DXA scan to see your treatment results with EVENITY

MAINTAIN THE BONE YOU GAIN

Discuss follow-up treatment options to help maintain what you've gained with EVENITY

Important Safety Information (continued)

Low calcium levels in your blood (hypocalcemia). EVENITY® may lower the calcium levels in your blood. Your low blood calcium should be treated before you receive EVENITY®. Call your healthcare provider if you

EVENITY® (romosozumab-aqqg) injection 105 mg/1.17 mL

WEIGHING BENEFITS VS RISKS

See the most common side effects of EVENITY.

EVENITY® has been studied in

NEARLY 11,000 WOMEN

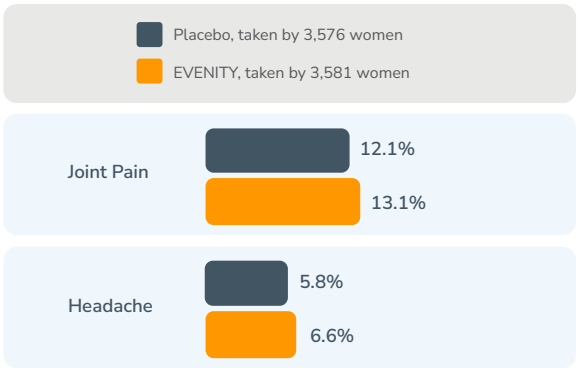

It's important to understand the possible side effects before starting a new treatment. In the case of osteoporosis, it's also helpful to consider the risk of not treating—which could result in a higher risk of fracture.

Most Common Side Effects

Drug safety is important. EVENITY was studied to learn about the benefits and possible side effects that come along with taking it.

One EVENITY study evaluated over 7,000 women with postmenopausal osteoporosis who received either EVENITY or placebo. The most common side effects were joint pain and headache. These are not all of the possible side effects of EVENITY. Talk to your doctor to learn more about the potential serious side effects of EVENITY. See the comparison of the most common side effects from the study reported below.

Talk to your doctor about the benefits and potential risks of taking EVENITY.

Important Safety Information (continued)

have symptoms of low blood calcium such as: spasms, twitches, or cramps in your muscles; numbness or tingling in your fingers, toes or around your mouth.

Severe jaw bone problems (osteonecrosis) may occur. Your healthcare provider should examine your mouth

EVENITY® (romosozumab-aqqg) injection 105 mg/1.17 mL

Please see Important Safety Information continued on the following pages.

EVENITY COST & COVERAGE

Learn more about what you may pay for EVENITY.

EVENITY IS COVERED

by most Medicare and Commercial plans

Individual patient out-of-pocket costs will vary.

MEDICARE

89% of patients with Original Medicare and supplemental insurance pay **$0 out of pocket** after meeting their deductible. What you pay will depend on the type of Medicare coverage you have chosen.

COMMERCIAL INSURANCE

$0 OUT OF POCKET

Eligible patients may pay as little as $0 out of pocket with the Amgen® SupportPlus Co-Pay Program. This can be applied to deductible, co-insurance, and co-payment.

MORE SUPPORT

If you do not currently have insurance, call an Amgen SupportPlus Representative at 1-866-264-2778 to hear more information about independent nonprofit foundations that may be able to help.
